

AutoShack Weekly Tip

USING THE CLIMATE CONTROL RECIRCULATION BUTTON

- The climate control recirculation button prevents air from being drawn from outside and circulates the air inside the car.
- Doing this can help make the AC and heating system work more efficiently. (Not have to work hard to heat or cool).
- It also makes the cooling and heating of the passenger compartment faster.
- It is recommended though, that your windows are open for about 30 seconds before starting recirculation.
