## MOISTURE: AN AC SYSTEM KILLER

- The AC system needs to be recharged (refilled) from time to time when the refrigerant (gas) runs out.?
- Moisture is the number one destroyer of AC systems.
- Moisture mixes with the refrigerant/refrigerant oil and forms hydrochloric acid that corrodes your AC lines.
- Although moisture removal before refilling is meant to be standard industry practice, some shops don't do it.
- It is highly recommended that you have moisture removed from the AC system before you refill.
