UNDERSTANDING AUTOMOTIVE AC REFRIGERANT (GAS) TYPES

- What most people refer to as AC gas is actually AC refrigerant.
- Most cars use a refrigerant called R134a but due to environmental preservation efforts, a new refrigerant called R1234yf has been introduced.
- Most modern cars are switching to r1234yf so if your refrigerant runs out and you need to refill, make sure to double-check which applies to you before refilling.
- Filling with the wrong refrigerant can damage your AC system because an AC system is designed with a particular refrigerant in mind.
