## 'KEYp' IT ON THE LOW

- One of the most common causes of ignition damage is hanging a heavy sets of keys from your ignition. Ignitions aren't designed to carry weight.
- An ignition contains internal components called tumblers.
- As you hit pot holes, go over bumps and negotiate turns, over time, the weight of the keys can dislodge the tumblers in the ignition - causing ignition damage and starting problems.
- Keep no more than 5 keys on the key ring.
