OUR TOP 4 FUEL SAVING TIPS

- **TUNE UP-** Take your tune up seriously and don't let your air filter get clogged. A dirty air filter restricts airflow so your engine will use more fuel to compensate for the lack of air.
- **CORRECT TIRE PRESSURE-** Under-inflated tires have more contact with the ground. This increases rolling resistance and results in poor fuel economy.
- **OVER SPEEDING-** Over speeding can waste fuel. On the highway, stay in the sweet spot- between 55 and 70 miles per hour (85 and 110 kilometers per hour).
- **TRAVEL LIGHT-** Hauling around unnecessary weight in your car's trunk/boot will negatively impact fuel economy. The more weight your vehicle has to carry around, the more fuel it will use.
