ADAPTIVE LEARNING

- It is a well known fact that when you disconnect your car's battery, you lose your preset radio stations.
- In actuality, you lose more than just your radio stations.
- Most vehicles have computers that collect driving habits data and adjust vehicle performance accordingly.
- When you disconnect your battery, the performance data is lost and the vehicle must go through a re-learning process.
- This re-learning process is called ADAPTIVE LEARNING and can take about 10km of driving before enough data has been collected to restore optimum performance.
